

ZHANIBEK DARIMBEK

Applied AI / Agent Engineer

zh.darimbek@gmail.com · +7 747 255 0778 · [linkedin.com/in/zhanibekd](https://www.linkedin.com/in/zhanibekd)

Engineer who ships production AI systems end to end — multi-agent reasoning, retrieval, guardrails, and the full-stack product around them. 7 years across AI platforms, fintech APIs, and payment infrastructure, including tech-lead and CTO roles.

EXPERIENCE

Lead AI Engineer — Sema US (Remote)

Oct 2025 – Present

Tech lead on Liz, an AI engineering-intelligence platform serving 100+ organizations.

- Took the AI engine from a basic chat with two integrations to a production multi-agent platform — document search, daily insight scorecards, privacy guardrails, and 20+ integrations.
- Architected a subagent-as-tool pattern with tool calling via code mode; cut per-query Jira/GitHub context from ~2M tokens to 2–5K synthesized summaries. Adopted team-wide.
- Led migration to a modular capabilities system spanning 20+ integrations.
- Built the document ingestion and semantic retrieval pipeline — extraction, pgvector-backed vector search, and grounding citations surfaced directly in chat.
- Delivered the full-stack chat experience in Vue on the AI SDK: real-time streaming, collapsible reasoning, tool-call visualization, markdown rendering.

Senior Software Engineer — Monite Berlin, Germany

May 2024 – Oct 2025

- Built accounts-receivable, payments, and accounting-automation APIs for neobanks, vertical SaaS, and payment providers.
- Designed a PDF customization engine for AR documents — dynamic templates, styling, and line-item configuration for partners' branding.
- Rebuilt the Recurring Invoices API (v2) with stronger automation and flexibility.
- Built an internal MCP server exposing the engineering handbook and API guidelines for AI-assisted development, and a PRD-to-Dev environment linking issue tracking, repos, and internal systems via MCP.

Chief Technology Officer — ioka group Almaty, Kazakhstan

Nov 2020 – May 2024

- Designed and built a payment-processing gateway for e-commerce and fintech — architecture, deployment, and maintenance.
- Built bank and financial-service integrations, expanding payment acceptance and strategic partnerships.
- Led and mentored the engineering team through one-on-ones and performance reviews.

Software Engineer — Kazdream Tech Astana, Kazakhstan

May 2019 – Nov 2020

- Automated OSINT collection from 20+ social, messaging, and web/mobile sources; built web crawlers integrated into B2B APIs and real-time systems.

SELECTED PROJECT

Clario — Sales Intelligence Platform *independent project*

An AI system that learns which sales tactics work from real outcomes, built on CRM, call-transcript, and chat data.

- Designed a multi-agent LLM pipeline that turns sales-call transcripts into structured quality scores and next-step recommendations; validated on 1,932 closed deals, where calls the system scored “strong” closed at ~6× the rate of low-scored calls.
- Built an automated labeling loop that propagates each deal's final won/lost result back across its full call history, generating situation → action → outcome training data for learning which tactics work in which situations.
- Cut per-deal AI cost ~3× by separating fixed product/pricing rules from learned tactic guidance and restructuring how each is fed to the model.

TECHNICAL SKILLS

AI / LLM: Multi-agent systems, tool/function calling, RAG & semantic retrieval (pgvector, embeddings), MCP servers, evals & guardrails; Pydantic AI, raw provider SDKs (OpenAI / Anthropic / Google Gemini), some LangChain / LangGraph

Backend: Python (async), FastAPI, aiohttp, REST API design

Data: PostgreSQL (+ pgvector), Redis, RabbitMQ

Frontend & Tools: Vue, TypeScript, AI SDK (streaming UIs), Docker

EDUCATION

M.Sc., Data Science — Nazarbayev University, Astana

2020 – 2022

Thesis: Sequential Deep Learning Models for Human Skeleton-based Gait Recognition

B.Sc., Computer Science — Nazarbayev University, Astana

2016 – 2020
